

# NIH Public Access

# Fact Sheet

NIH Public Access is the free online public accessibility of peer-reviewed final manuscripts accepted for publication resulting from NIH-funded research. The NIH public access policy requests that NIH investigators provide electronic copies of all final version, peer-reviewed manuscripts upon acceptance for publication, if the research was supported in whole or in part by NIH funding.

The policy does not apply to:

- book chapters,
- editorials,
- reviews,
- conference proceedings, or
- patents.

NIH-funded research publications are archived in NIH's digital repository for biomedical research – PubMed Central (PMC). Authors' final manuscripts can be submitted in the usual electronic formats accepted by journals, e.g., most word processing formats or PDF.

At the time of voluntary submission to PMC, the author specifies when the manuscript is to be made publicly accessible through PMC. Posting for public accessibility through PMC is strongly encouraged as soon as the manuscript is submitted to the publication or/and within twelve months of the publisher's official date of final publication. The publisher may choose to furnish PMC with the publisher's final version, which will supersede the author's final version.

If the publisher agrees, public access to the publisher's final version in PMC can occur sooner than the timing originally specified by the author for the author's final version.

Additional details and instructions on the use of the PMC manuscript submission system is posted on the NLM PMC website at <http://www.pubmedcentral.nih.gov/>.

NIH Library staff facilitates the input of a manuscript to PMC for NIH staff only. The NIH Library's Manuscript Submission Assistance Service web page provides helpful information including links to PMC, to the NIH Public Access Policy web page, and to specific publishers' Open Access policies.
